Stereo Headphones with active 'Safe Sound' volume limiting technology

Key Features

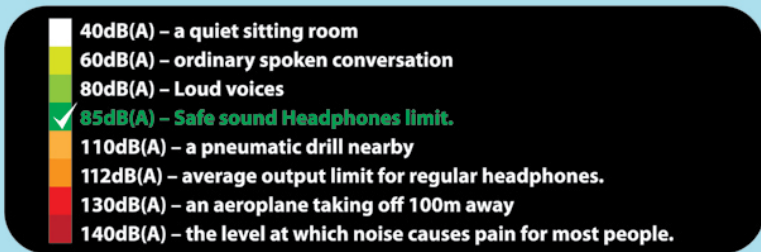

- Active '**Sound Check**' technology to limit output volume and protect young ears
- **Adjustable headband** suitable for children's heads
- **3.5mm Jack** for connection to most music sources
- **Comfortable** earcushions

Safe sound headphones are perfect for use on journeys with in car DVD players or for music.

Why Safe Sound?

Safe sound technology **limits audio input to 85db** protecting young ears, providing **real protection** against the high sound pressure levels that cause hearing damage when listening to music for extended periods of time.

12% of children aged 6–19 years have **permanent hearing damage** from excessive noise exposure.

How it works

Safe Sound Headphones remain within the **safe limit of 85dB**, to protect kid's ears.
